

METRO'S EDGE

Metro Parking manages a national portfolio of car parks. Senior executives wanted to change their proprietary intercom and CCTV monitoring platform because it was expensive to support and lacked flexibility when bumping in new sites.

Online Security became a trusted partner by helping senior executives to re-imagine Metro's control centre capability and find an agile, lower cost multisite monitoring solution

Gone are the days of just using an intercom control desk to assist customers... displaying realtime events as easy to understand information and popping up live video from remote car parks gives Metro a competitive "edge".

METRO'S EDGE

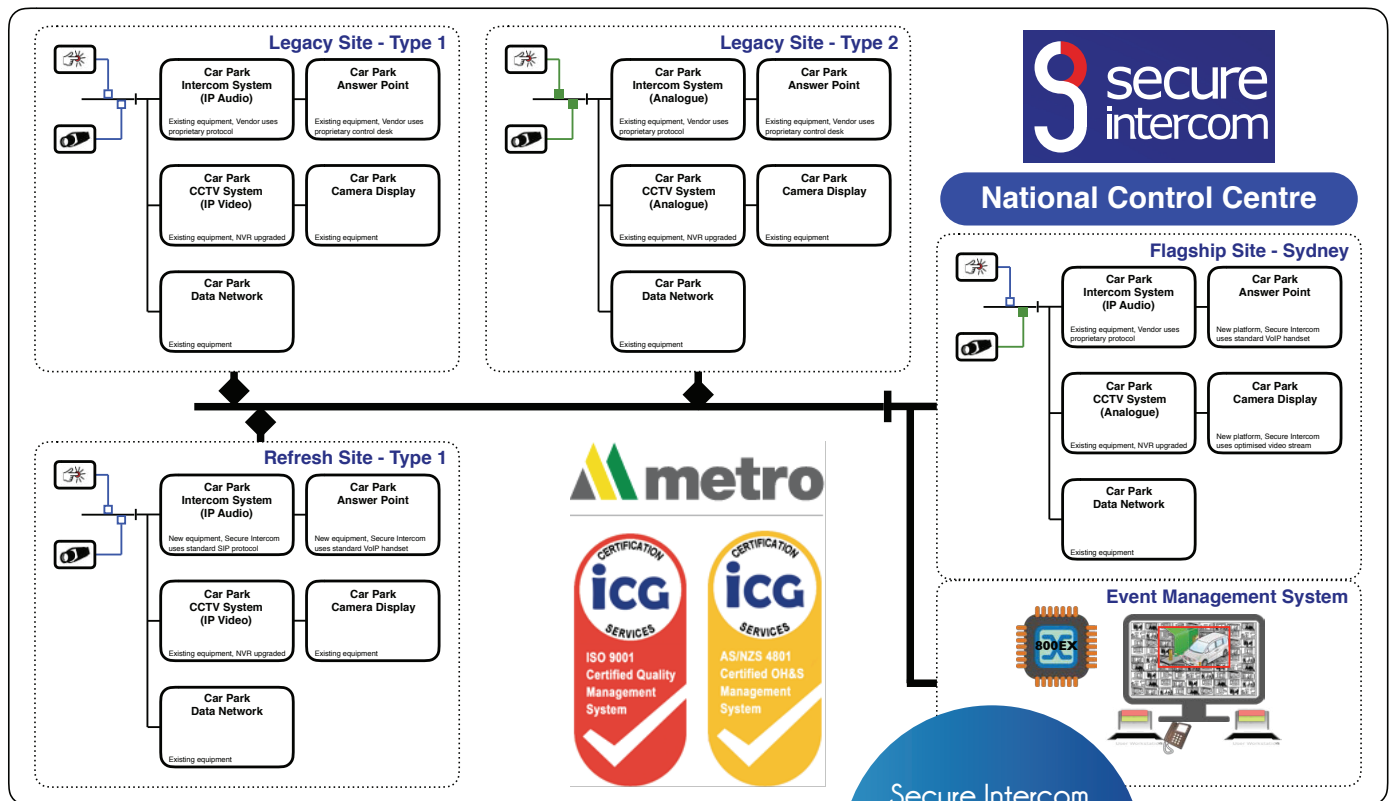

Brent Gibson

General Manager

Responsible for Metro Parking's overall operation including their 24/7 national control centre.

Brent likes multi-vendor compatibility so he can easily bump in new sites. Unified communication so he can streamline systems and processes. Audio recording so he can easily review customer experiences. Popup video so control centre staff can see what's happening at the remote car park.

Secure Intercom can help you find a 'thumbs up' solution too!
